

Autodesk Inc.
111 McInnis Parkway
San Rafael, CA 94903

To Whom It May Concern:

I would like to express my interest in holding a position at Autodesk as a Software Developer Intern for the summer of 2014. I can be in Berkeley throughout the entire summer, and believe that I am very qualified and capable of meeting and exceeding the expectations of this internship.

My education at UC Berkeley has prepared me extensively for the role as a software developer. Through the computer science program, I have taken two year's worth of extremely rigorous classes that have given me expertise in writing code in both Java and Python. I am learning C and Objective C in my classes this semester. Additionally, the mathematics program has not only provided for me a depth of mathematical knowledge, but also the ability to think very critically and logically.

Looking at the products, especially those that improve and enhance the education community, Autodesk creates helped spark my interest in working for the company. I have enormous respect for educators and those improving the education system. I believe that it is vital to everyone to ensure that our schools are bringing up intelligent and freethinking generations, and I was excited to see that Autodesk was investing in future generations of people. I will bring this passion for education into the workplace and bring a high level of energy to the company.

Upon reading about Autodesk, I think I can fit in and add considerably to the office culture. Through my considerable project work in class that I did with my classmates and friends, I have learned that I work remarkably well with others. I can find the balance between maintaining a positive attitude through having fun and getting a great deal of work done, and thrive in relaxed and cooperative, rather than competitive, working environments. I am very outgoing and personable, and succeeded in applying these traits to my position as social chair of my fraternity. I am passionate about getting friends together and have continued to do so even after my term as social chair has ended.

I look forward to meeting more people and learning more about Autodesk. I hope that I will be able to contribute to the company. Thank you for all your time and your consideration.

Sincerely,

Christopher Dunn
